LiuBai-RWKV: semantic-first RWKV-VAE (v4) and block-flow cursor LM

(a) RWKV-VAE v4: partitioned latent, dims 0–31 semantic, dims 32–63 acoustic

MERT runs only on the encoder side (training data, generation prompts).
Generation produces z directly and decodes it with the RWKV decoder: no MERT at decode time.

(b) Cursor LM: causal RWKV-7 over blocks of z, per-block flow head, monotonic lyric cursor
